Job description to post August 2020

The thinkCausal project is now hiring a Director of Research and Data Analysis. This individual will have primary responsibility for organizing the research efforts for the project across a team of faculty, consultants, and students. In addition this individual will help to design, build, test, and evaluate a suite of educational tools and software developed to help education researchers to use and understand sophisticated causal inference methods. For more information see this project summary.

The position requires a MS degree in Statistics or equivalent training in programming and statistics obtained through the pursuit of a graduate degree including coursework or other formal training in causal inference. Ability to communicate statistical concepts to non-technical audiences will be critical. Programming expertise in R and R Shiny is required, as is experience with applied data analysis projects. Experience with other programming languages or tools (particularly web development tools) would also be useful. Teaching experience or training in educational technology is a bonus.

Annual salary starts at $55,000 but will be commensurate with experience.

To apply please submit a cover letter and CV to jennifer.hill@nyu.edu. The cover letter should explain clearly how the applicant’s experience matches the desired skills and knowledge. Application deadline is Friday August 21st, 2020.
