Postdoctoral associate for the Cash Transfer Lab.

The mission of the Cash Transfer Lab at New York University is to build an evidence base regarding cash transfer policies like a Universal Basic Income. We answer the fundamental questions of how a Universal Basic Income policy would transform American families, communities and economies. The first major initiative is to study the effects of the permanent fund dividend (PFD), a policy in Alaska that has paid every Alaskan resident a substantial amount of cash annually since 1982. This is the closest policy in the world to a Universal Basic Income.

Responsibilities:
Responsibilities may include, but are not limited to:
- Writing a peer reviewed journal article on approaches to this case
- Developing new approaches to identifying causal effects
- Writing code/packages to implement developed approaches
- Advising applied research teams on their approaches

Qualifications:
A Ph.D. in any one of the following fields: Statistics, Applied Statistics, Biostatistics, Economics, Political Science, Sociology, Demography, Public Health or a closely related discipline. Ph.D. must be completed by September 2021.

To apply:
Please apply by 3/29/21 at this link: https://as.nyu.edu/cash-transfer-lab.html
