The Department of Statistics welcomes applications for the University of Missouri’s Preparing Future Faculty – Faculty Diversity (PFFFD) Postdoctoral Program. This program develops scholars for a faculty career.

**PROGRAM OVERVIEW**

The PFFFD program is designed to promote faculty diversity by developing scholars for tenure-track faculty positions at the University of Missouri and elsewhere. Applicants should demonstrate how they can contribute to faculty diversity, such as through membership in a group that is historically underrepresented or underserved or through other training and experience.

The fellowships are typically for two years, during which time the postdocs focus on further developing their independent research programs and participating in professional development activities that integrate and expose them to the faculty experience, including the opportunity to teach during the fellowship.

The postdoctoral stipend is competitive and comes with University benefits and professional development funds.

To be eligible for this program, applicants must have completed their doctoral (or terminal) degree or expect to complete their degree by July 1, 2023.

**DEPARTMENT OF STATISTICS**

We seek applications from individuals interested in developing novel methodology in Bayesian statistics, biostatistics, machine learning, or spatio-temporal statistics, but applicants from all areas of statistics are encouraged to apply.

The Faculty of MU’s Department of Statistics consists of 16 tenured, tenure track, and teaching faculty members, four are Fellows of the American Statistical Association, three are Fellows of the Institute of Mathematical Statistics, four are elected members of the International Statistical Society.

**CALL FOR APPLICATIONS**

The 2023 Call for Applications is now released, and the applications are due September 30, 2022. Use the QR Code to access the call.
